

DATASHEET

Unique viewing experience.

The perfect device for nature lovers who would just like to see more.

BINOCULARS

10x40

The 84 m field of vision at a distance of 1000 m offers superior long-distance viewing. The 10x magnification offers a clear long-distance view in the outdoors.

The two-sided multiple coating on the lens glass provides the binoculars with a high contrast and a very good light transmittance. The coating also reduces interfering reflexes and protects the lenses from scratching.

The binoculars are light to handle and are ideally suited for users wearing glasses.

The flexible eyecups and diopter compensation make the binoculars easy to use, in particular during longer observations.

HIGHLIGHTS

- Blue coated lenses
- Flexible eyecups
- Diopter compensation
